

Investment Opportunities in a Sustainable Grid:

Distributed Generation, Distributed Storage, Grid, & Engaged Consumers

BECI - Philomathia Forum |

Investment Opportunities in a Sustainable Grid

- Moderator Jeff McDermott, Greentech Capital Advisers
- Tim Green (Imperial College): In Europe, for renewables integration, we need an all of the above approach -- storage, variable pricing, trading between markets -- but the problem gets more challenging as penetration increases.
- Nadia Maizi (MINES ParisTech): Power is cheap in France, and it's been difficult to engage consumers. How can we communicate more effectively?
- Janice Lin (California Energy Storage Alliance): Storage exists for many applications, and our perennial challenge is monetizing those applications with market design.
- Alex McEachern (Power Standards Laboratory): We believe that we can put more intermittent power on the grid than we thought, if we have the measurement instruments and the inverters are programmed correctly.
